

Why are we here?

The Flood Control District is conducting an Area Drainage Master Plan for your community. This plan will identify area flooding problems, sources, and potential hazards in the Rio Verde area. The study team will then identify a range of community-based solutions to prevent damages to property or loss of life from flooding.

The District has held this public meeting tonight to let you know what we are proposing for your neighborhood and to gather feedback from the community.

Throughout the course of the project, the District will hold a number of meetings and open houses to inform the public about the progress of this project.

Tonight: 6:30 P.M. Presentation

Please Take a Moment To Look Over The Exhibit Boards
